SUMMARY

Full Stack Developer with hands-on experience building production-ready MERN stack applications featuring RESTful APIs, JWT authentication, real-time WebSocket communication, and AI-powered features using Google Gemini API and LangChain RAG pipelines. Proficient in Docker, Nginx, CI/CD workflows, and cloud deployment. Computer Science undergraduate (CGPA 3.83/4.0) seeking a Full Stack / Software Engineer role to build scalable, high-performance web applications.

EDUCATION

University of Engineering and Technology Peshawar

Oct 2022 – Aug 2026

Bachelor of Science in Computer Science

CGPA: 3.83 / 4.0

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Systems, Computer Networks, Object-Oriented Programming, Software Engineering

PROJECTS

CodingBuddy | *Node.js, Express 5, React 19, MongoDB, Socket.io, Docker, Nginx, Google Gemini API*

[Live](#)

- Architected a full-stack developer-matching platform (“Tinder for Developers”) with skill-based MongoDB aggregation ranking, real-time Socket.io chat with typing indicators and read receipts, and JWT authentication via HTTP-only cookies.
- Built 5 AI-powered features using Google Gemini 2.0 Flash API: developer match analysis, professional bio generator (3 tones), in-chat code explainer/debugger, profile strength scorer, and personalised project recommendations.
- Implemented production-grade DevOps pipeline: multi-stage Dockerfile, Docker Compose orchestrating App + MongoDB + Nginx, reverse proxy with WebSocket upgrade, gzip compression, and rate limiting — achieving SSL-ready deployment.
- Engineered security middleware stack (Helmet, CORS, bcrypt, rate-limited auth) and structured Winston logging with file rotation; automated stale-request cleanup and daily stats via node-cron jobs.

ResearchSynthesis AI | *React, Flask, Python, LangChain, Google Gemini API, ChromaDB, MongoDB*

[GitHub](#)

- Built a full-stack RAG (Retrieval-Augmented Generation) research platform using LangChain, Google Gemini API, and ChromaDB vector database, enabling semantic search and citation-backed answer generation over uploaded PDFs.
- Engineered a scalable document processing pipeline with PyPDF and intelligent text chunking; generated vector embeddings for similarity search, reducing irrelevant context retrieval by design.
- Developed RESTful backend services with Flask and integrated MongoDB for persistent chat history, project-based document management, and metadata filtering.
- Designed and deployed a responsive React + Vite + Tailwind CSS frontend with Axios API integration and retry logic for resilient error handling.

OneClick Chrome Extension | *JavaScript (ES6), Chrome Extension APIs, Google Gemini API*

[GitHub](#)

- Developed an AI-powered Chrome Extension that summarises web articles and generates line-by-line code explanations using Google Gemini Generative AI API for NLP-based text analysis.
- Implemented advanced browser interactions via `chrome.scripting`, `chrome.storage`, and `contextMenus` APIs, enabling dynamic content injection and persistent user preferences.
- Designed a responsive popup UI with loading/error state management, clipboard integration, and optimised async request handling, improving perceived performance by eliminating UI blocking.

Blog Platform | *React, Vite, Tailwind CSS, Appwrite, Redux Toolkit, React Router*

[Live](#)

- Built a full-stack blog platform with Appwrite backend (authentication, database, file storage), Redux Toolkit global state management, and React Hook Form validation.
- Integrated TinyMCE rich-text editor with HTML parsing and dynamic content rendering; deployed on Vercel with optimised build pipeline via Vite.

ATS Resume Checker | *React, Google Generative AI API, React PDF to Text, React Markdown*

[Live](#)

- Built an AI-powered resume analysis tool achieving **85% PDF parsing accuracy**; integrated Google Generative AI API for content analysis and delivered actionable improvement insights to 100+ users.

EXPERIENCE

Web Developer Intern <i>Digital Empowerment Network</i>	Sep 2024 – Oct 2024 <i>Remote</i>
- Developed and shipped 5+ interactive web tools using HTML, CSS, and JavaScript, improving cross-device responsiveness and reaching 500+ end users. - Optimised DOM manipulation and event-handling logic, reducing dynamic rendering time by 40% across all deployed tools. - Improved cross-browser compatibility and UI consistency using structured layouts and responsive design principles, eliminating rendering bugs across Chrome, Firefox, and Safari. - Collaborated in an Agile remote team, delivering iterative releases on schedule using Git version control and GitHub for code reviews.	

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, Java, C++
Frontend: React.js, React 19, Vite, Tailwind CSS, Bootstrap, SASS, Framer Motion, Redux Toolkit
Backend & APIs: Node.js, Express.js, Flask, FastAPI, RESTful APIs, GraphQL, Socket.io, WebSockets
Databases: MongoDB (Atlas, Mongoose ODM, Aggregation), MySQL
AI / ML: Google Gemini API, LangChain, RAG, ChromaDB, NumPy, Pandas, Scikit-Learn
DevOps & Cloud: Docker, Docker Compose, Nginx, Vercel, GitHub Actions, CI/CD
Tools: Git, GitHub, Postman, Cloudinary, Winston, JWT, bcrypt, node-cron
Practices: Agile, REST API design, Microservices, Unit Testing, Code Review, Responsive Design

CERTIFICATIONS & AWARDS

1st Place — Front-End Web Development Marathon, Decentral Developer
Meta Front-End Developer Professional Certificate — Meta (Coursera)
IBM Full-Stack JavaScript Developer — IBM (Coursera)
Machine Learning Specialization — Coursera
Deep Learning Specialization — Coursera
